

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

March 15th.

Vice-President BRIDGES in the Chair.

Fifty members present.

The following were presented for publication in the Proceedings :

Notes on *Coluber calligaster* Say, and description of new species of Serpents in the collection of the North-western University of Evanston, Ill. By R. Kennicott.

Ichthyological Notices. By Charles Girard, M. D.

And were referred to Committees.

The Proceedings of the Academy for February was laid on the table by the Committee.

Mr. Foulke announced the death, at Rome, on the 13th ult., of Charles F. Beck, M. D., late a member of the Academy.

---

March 22d.

Vice-President BRIDGES in the Chair.

Forty-four members present.

The following was presented for publication in the Proceedings :

Catalogue of Birds collected on the rivers Camma and Ogobai, Western Africa by Mr. P. Duhaillu, in 1853, with notes and descriptions of new species. By John Cassin.

And was referred to a Committee.

Dr. Leidy called the attention of the members to the tooth of the *Mastodon*, from Tambla, Honduras, presented by Capt. J. M. Dow, this evening. It is a last superior molar, and presents a greater degree of developement of the intervening accessory lobes of the crown than is usual in the teeth of *Mastodon ohioiticus*, but it nevertheless most probably belongs to the same species.

Dr. L. then directed attention to the fine collection of teeth and fragments of jaws of *Mosasaurus*, from the Green Sand of Monmouth Co., New Jersey, presented by Mr. J. H. Slack, and other gentlemen through him. The specimens illustrate, in a striking manner, the mode of development and succession of the teeth, noticed some time since in the Proceedings, (1857, p. 176). The specimens further exhibit variations in form and size, though obtained from the same individual. The teeth, with conical crowns and polyhedral sides, are those usually viewed as characteristic of *Mosasaurus*. Others had been referred to the genus *Geosaurus*; and such as were much compressed with trenchant borders, and without planes, were viewed as characteristic of the genus *Leiodon*.

The large humerus, presented by Mr. M. P. Rue, through Mr. Slack, was not found in the same marl pit as the *Mosasaurus*, though in the same formation not far distant. It bears a strong resemblance in form and size to the corresponding bone of *Hadrosaurus*, though presenting sufficient anatomical difference to belong to another genus. It perhaps belongs to *Mosasaurus*; the bones of the extremities of this animal yet remaining unknown.

Dr. L. added he was inclined to suspect that all the remains of *Mosasaurus* hitherto discovered in America belonged to one species, at least there appears insufficient evidence to separate them. Perhaps, however, the remains of the *Mosasaurus*, discovered in the green sand of the western portion of the continent, may indicate a different species from those obtained from the eastern portion.

1859.]
